

## **2016 Presidential election**

**The real job killer in America is automation, robotics, artificial intelligence. You're not going to lose because your neighbor's child gets a chance to go to college. You're not going to lose because a hard-working immigrant family starts a small business. That's good for you!**

**We never made that case.**

**And the message from Trump was a retrograde message of nostalgia: "We can go back to the way things were. You don't have to compete with a woman for a job. Or with a striving young immigrant." It's a falsehood that gave some comfort to people and gave them permission to scapegoat others.**

**Hillary Clinton**
