

# Artificial intelligence

Every child will have an AI tutor that is infinitely patient, infinitely compassionate, infinitely knowledgeable, infinitely helpful.

The AI tutor will be by each child's side every step of their development, helping them maximize their potential with the machine version of infinite love.

...

Rather than making the world harsher and more mechanistic, infinitely patient and sympathetic AI will make the world warmer and nicer.

...

The development and proliferation of AI — far from a risk that we should fear — is a moral obligation that we have to ourselves, to our children, and to our future.

**Marc Andreessen on "our new era of AI"**
