

## **Global warming**

**The world's average temperature has increased by around 1C since mass industrialization, with 16 of the 17 warmest years on record all occurring since 2000.**

**The Earth hasn't experienced carbon dioxide levels as high as they are now for at least three million years, when the sea level was around 80ft higher than it is today.**

**The Guardian, May 9, 2017**
