

Warfare

Future wars will no longer be about who can mass the most people or field the best jets, ships, and tanks.

Instead, they will be dominated by increasingly autonomous weapons systems and powerful algorithms.

...

... as global urbanization draws more people into cities and nonstate actors pivot to urban guerrilla tactics, the decisive battlefields of the future will likely be densely populated areas. Such fighting is far more deadly and far more resource-intensive. It will therefore require even more robotic weapons.
